Soil Health Incentive	Field Name	Total Acres	Years Paid	Payment Rate	Unit	Paid Acres	Payment Amount

---

*Total CFF Reimbursement for Soil Health Practices*

**Terms & Conditions**

I have, or will be, installing the above-listed soil health practices. By signing this document, I understand and agree to the following conditions:

1. For Cover Crops, the practice has been installed in time to provide substantial growth and/or ground cover before winter. The cover crop species can winter kill, or over winter, but the field must be left un-tilled until spring. Harvesting the cover crop the following spring as forage, or grain for seed, is allowed. Harvesting as grain for market, e.g. winter wheat and oats, is not allowed.
2. If you are No-Till planting in spring, it must have been no-tilled in the previous fall to qualify. No prior tillage can be done before fall no-till planting.
3. For Low Disturbance Manure Application, fields shall remain no-tilled through the calendar year. Surface applications on established alfalfa and cover crops at rates compliant in 590 Nutrient Management Plans, yet below 10,000 gallons/acre are acceptable for payment.
4. For Harvestable Buffers, they do not need to meet NRCS standards unless NRCS funds are contributed, but a minimum width of 15 feet is required and it must stay in place for a minimum of ten years.
5. Grazing Stipend, Equipment Conversion, Manure Management/Composting, and all Nutrient Tests require receipts and/or analysis to be submitted. Equip Conversions are limited to planting equipment.
6. If you are Planting Green, the field must be at least 50% covered with a living cover crops to receive incentive payment.
7. I am giving the Milwaukee River Watershed Clean Farm Families and Ozaukee County permission to utilize the map and conservation practice information for public educational purposes.
